TRANSMISSION

Allison HD4560 with integral retarder mounted directly to the engine, fully automatic transmission with planetary gearing, electronic control with six forward and one reverse gear.

Remote mounted 2 speed transfer gearbox taking drive from the transmission and feeding it via a lockable differential to front and rear wheels.

AXLES

Three axles in permanent all-wheel drive (6x6) with differential coupling between each axle to prevent driveline wind-up. Heavy duty axles with full floating axle shafts and outboard planetary reduction gearing. Automatic limited slip differentials in each axle. Leading rear axle incorporates a through drive differential to transmit drive to the rearmost axle. This differential and the dropbox output differential are locked simultaneously using one switch selected by the operator.

Differential ratio	3.70 : 1
Planetary reduction	6.35 : 1
Overall Drivetrain reduction	23.50 · 1

SUSPENSION

Front	Four trailing links and a panhard rod locate the front axle giving a high roll centre. The optimized front axle position along with the wide spaced main and rebound mounts, mounted directly above the axle and long suspension travel, combine with the two heavy duty dampers each side to give excellent handling and ride.
Rear	Each axle is coupled to the frame by three rubber-bushed links with lateral restraint

Each axle is coupled to the frame by three rubber-bushed links with lateral restraint by a transverse link. Pivoting inter-axle balance beams equalise load on each rear axle. Suspension movement is cushioned by rubber/metal laminated compression units between each axle and underside of balance beam ends. Pivot points on leading and trailing links are rubber-bushed and maintenance-free.

STEERING

Hydrostatic power steering by two double-acting cushioned steering cylinders with pressure supplied by a variable displacement / load sensing piston pump. Secondary steering pressure is provided by a ground driven pump mounted on the dropbox. An audible alarm and warning light indicates should the second system activate.

occoma cyclom activator	
Steering angle to either side	45°
Lock to lock turns, steering wheel	4
System pressure	3,500 lbf/in2 (240 bar)
SAE Turning Radius	30-2 ft/ins (9,185 mm)
Clearing Radius	31-9 ft/ins (9.675 mm)

FRAME

Front and rear frames are all-welded high grade steel fabrications with rectangular box-section beams forming the main side and cross members. Inter-frame oscillation is provided by a large diameter cylindrical coupling which houses nylon bushings. Frames articulated 45° to either side for steering by means of two widely-spaced pivot pins in back-to-back sealed taper roller bearings.

BODY

All-welded construction, fabricated from high hardness (min 360 BHN) 1 000 Mpa yield strength steel. Dual slope tailchute improves material ejection from body.

Plate thickness:	Floor and tailchute	0.6 in (15.0 mm)
	Sides	0.47 in (12.0 mm)
	Front	0.31 in (8.0 mm)
Volume:	Struck	22.8 yd³ (17.4 m³)
	Heaned 2:1 (SAE)	30 vd3 (23.0 m3)

HOIST

Two single -stage, double-acting hoist cylinders, cushioned at the base end. Variable displacement / load sensing piston pump driven from power take-off on transmission. Full flow return line filtration. Full electro-hyrdraulic hoist control, with electronic detent in power down.

System pressure	3,500 lbf/in ² (240 bar)	Raise (loaded)	12.5 seconds
Pump output flow rate	1.43 gal/sec (5.4 liter/sec)	Lower	8 seconds

BRAKES

All hydraulic braking system with sealed, forced oil cooled, multi discs on all axles. Independent circuits for front and rear brake systems.

Parking Spring-applied, hydraulic-released disc on rear driveline Secondary Secondary brake control actuates service and parking brakes
